

Schroth Physical Therapy

The Schroth Method is a scoliosis-specific approach to exercise that is based on the specific curve pattern of the patients spine.

The effect of Schroth Physical Therapy is still under investigation. It does not replace bracing, but may have additive value to preventing progression of scoliosis.

SCOLIOSIS BRACING

INFORMATION
& RESOURCES

**SEAVIEW
ORTHOPAEDICS®**

A custom back brace is prescribed in growing children with scoliosis to help decrease the risk of curve progression.* When used as prescribed, it reduces the risk of needing surgery by **56%**. It is recommended to wear the brace for a **minimum of 16 hours a day**, with the ideal goal being **23 full hours of wear**.

*goal is to decrease further curve progression, bracing will not permanently reduce the curve

Remove the brace for sports, exercise, and breaks when needed.
Focus on core strengthening and flexibility when exercising a few times per week.
